

15 inch LSI

SEQUIRE ID LSI

Overview

Upgrade your existing 15 inch LSI display to Leary's new SEQUIRE ID fingerprint access control screen. This feature is designed to offer protection and tracking to controller setting changes. [Trade-in credit for replacing current LSI displays with the SEQUIRE ID control screen \(CPU05\).](#)

Benefits

- New SEQUIRE ID fingerprint access control allows for an added layer of 'Button Security' with fingerprint identification technology
- Preferred over the traditional numeric passwords that are sometimes forgotten or are compromised
- Side access USB ports allows for easy transferring/uploading of files, upgrades or Production Reports. Also allows for Monet navigation with a mouse or keyboard if ever needed

Requirements

- The SEQUIRE ID display will require a minimum Monet version of 2.8 which is included with the upgrade
- The Fingerprint reader requires a USB connection to the controller
- SEQUIRE ID function requires an 8120 CPU or newer
