

## Multicolor Beacon Light Tower

The multicolor beacon light tower is a visual management tool that works in conjunction with Array™ controllers and compatible with most versions of the Monet™ operating system. By plugging right into the RS-485 LDC port on the back of the controller, the beacon light tower integrates with the Monet operating system to provide continuous real time system status.

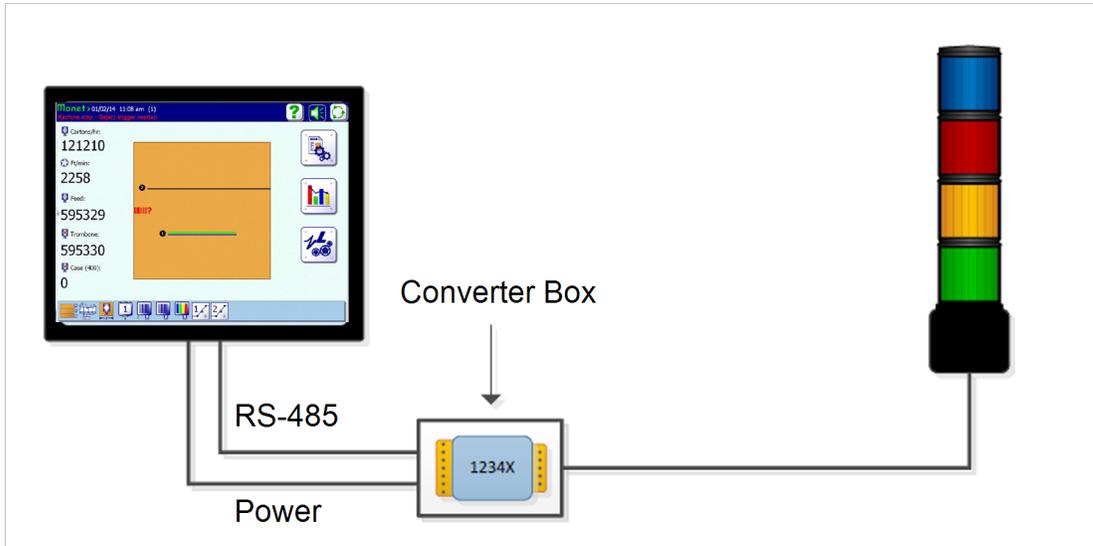

The multicolor beacon light tower consists of four colors which each represent a different quality checkpoint. For example, the tower can be customized to communicate with the barcode station, rejection, glue detection, or simply to show that the machine is down. When the system detects a suspect carton in its respective region, one of the lights will blink on and off for a specified time or until the system is reset. Get instant system status notifications on each line using the visual beacon light tower.

- Visual management tool
- Mounts anywhere on your existing folder gluer
- Colors indicate system status
- Each light is programmable for customized use
- Works with most existing and new Monet operating systems
