GT51 UPGRADE OFFER

4:1 Pump, 2:1 GRU

GT51 5:1 pump, 4:1 GRU

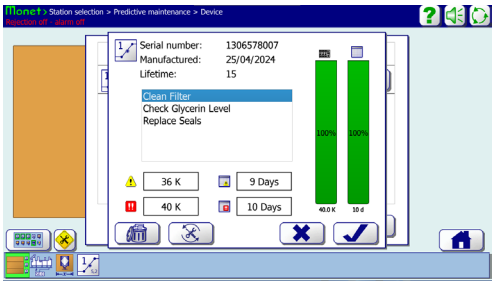

- 5:1 Pump with 4:1 GRU
- Simple maintenance for changing filters and replacing seals on-the-line
- Predictive Maintenance Notifications with Monet 3.3
- Run-away protection to shut down the pump if excessively cycling speeds are detected
- Glue viscosity range: 0.3 - 2 Pa·s (300 - 2,000 cps)*
- Trade-in credit for upgrading to new pump (GFU09)

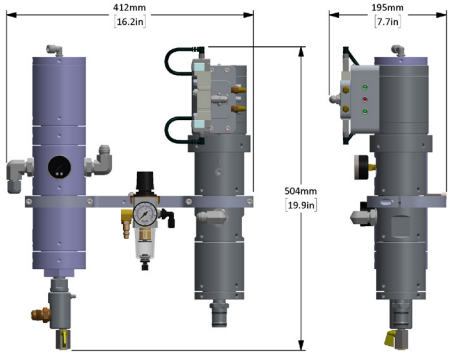

*The viscosity range quoted relates to this product only. For viscosity ranges for the complete system, please also check relevant glue valve data.

Available as an upgrade kit to utilize an existing 4:1 GRU, the GT51 pump replaces the original 4:1 pump. Pump only or Pump & GRU upgrade packages available.

Combining a powerful 5:1 pump with a 4:1 GRU, the GT51 maintains consistent glue pressure across a wide range of straight-line, four-corner and six-corner carton applications. The system supports adhesive viscosities from 300 to 2,000 cps and fluid pressures from 55 to 325 psi, giving converters greater flexibility across changing production requirements.

A key advancement is the addition of Predictive Maintenance Notifications through Leary's Monet 3.3 operating system. Pump cycles and operating time are tracked to alert operators when routine service is approaching. Notifications include: clean filter, check glycerin and replace seals.
