

IMPROVE PRODUCTION EFFICIENCIES

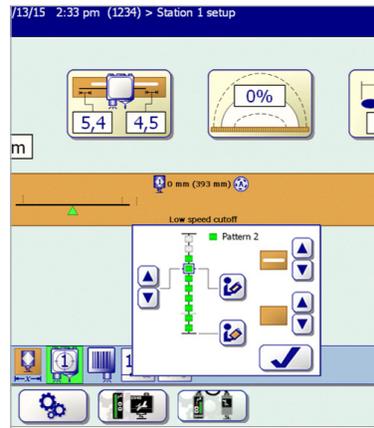

Leary provides accessories for your existing Array™ controller aimed at quickly improving folder gluer machine efficiencies related to the gluing and detection process. Choose from one or multiple products and solutions that ensure fully operable application and detection stations, improve carton job set-up times, increase machine up-time and help monitor controller system operations.

Remote Multi Color Beacon Light

- Visual management tool
- Continuous real time system status updates
- Four color indicators
- Individual programmable lights for customized use
- Works with all versions of Monet operating systems

Remote Teach for Glue Detection

- Fine-tune adjust the sensitivity of glue detection sensors through Monet touch screen
- Remote teach for UV40 and iTac glue sensors
- Avoid crossing safety light curtains
- LED meter sensitivity status, fine tune, coarse adjust and learn glue or background options
- Upgradeable in the field

Low Glue Level Alarm

- Monitor adhesive level of extrusion glue in 30L bucket
- Audible and visual notice on Monet interface
- Connect directly to available pattern on Array controller
- Optional compact controller with audible notice of low glue level

Glue Fill Controller

- Automatically monitors glue pot adhesive level
- Low and high level status are audibly and visually indicated
- Minimal maintenance of sensing element
- Maintain a constant glue pot level with automatic adhesive filling
