

maQ BASIC QUALITY ASSURANCE SYSTEM

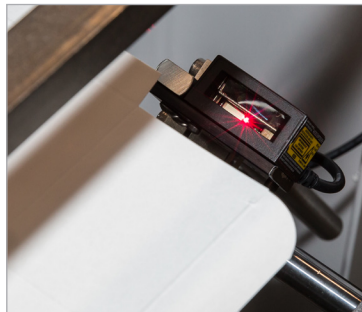

The **MAQ™** detection package with Monet OS is a cost-effective system capable of delivering seamless glue and mixed copy detection. Monet's simple set up is easy to learn and with a real time view of the detected cartons and descriptive failure reason messages. All triggers and encoders are monitored through our closed loop SureScan™ technology, guaranteeing 100% inspection.

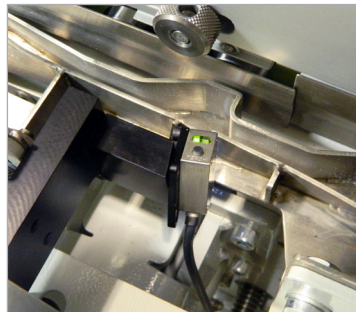

- Up to 3 detection stations
- Glue detection
- Monitor mixed copy
- Detection accuracy at 200,000 cartons/hr and 750 m/min

Glue Detection for glue applied by the lower glue wheel (side seam).

Mixed Copy Detection to protect against mixed product. Pharmacode option to detect absence and presence of color or measure print-to-cut registration.

Kicker Option to ensure product is identified for removal from production.

The MAQ Quality Assurance Package is configurable with glue detection, code reading, rejection and mounting. Controller components include a (3) channel quality assurance controller with shutdown cable, encoder, power cable and installation kit.

Additional options include:

- M06 cold glue detection with cables and mounting
- Laser 1D code reader or pharmacode reader with cables and mounting
- Rejection kicker with cables and mounting
- Mounting post for controller
